EDUCATION

California State University, Fullerton

Bachelor of Science in Computer Science

Fullerton, CA

Expected Graduation Date: May 2026

Norco College

Associate's in Computer Science

Santa Ana, CA

Aug. 2022 – May 2024

EXPERIENCE

Data Entry

Smile Brands Inc.

April 2024 – Present

Costa Mesa, CA

- Processed and configured dental insurance plans by entering structured procedure data and code specific fees into Dentrix Ascend, ensuring accurate system integration and compliance with office submitted tickets.
- Delivered prompt technical assistance to 600+ offices, diagnosing and resolving issues related to insurance configurations, fee schedule uploads, and data integrity.
- Executed fee schedule updates using advanced Excel functions.

Software Engineer Intern

University of California, Irvine

July 2021 – August 2021

Irvine, CA

- Built Python simulations using Matplotlib and mathematical libraries to visualize algorithm behavior.
- Collaborated closely with mentors to debug and improve Dijkstra's algorithm and motion planning logic.
- Contributed to software documentation by analyzing complex algorithms and providing clear technical feedback.
- Delivered presentations on simulation results while strengthening core programming and development skills.

PROJECTS

Logfolio | *HTML, CSS, JavaScript, Node.js, Express.js, MongoDB*

June 2025 – August 2025

- Developed a full-stack trade journaling web application to log, track, and analyze stock trades.
- Implemented secure JWT-based authentication and role-based access control for users and admins.
- Integrated external APIs (Finnhub, NewsAPI, YahooFinance) to provide real-time market data, news, insider sentiment, and IPO events.
- Deployed the application using Render and MongoDB Atlas, ensuring scalability and reliability.

FindMyStuff | *HTML, PHP, CSS, JavaScript, MySQL*

January 2025 – May 2025

- Constructed a full stack web application to enable users to post, search, and manage lost and found item listings with image upload support.
- Developed secure server-side scripts to handle database CRUD operations and image processing.
- Designed and optimized relational database schemas and queries to ensure accurate search results.
- Implemented client-side JavaScript for dynamic form validation and UI updates.

NexusNews | *HTML, CSS, JavaScript*

August 2024 – December 2024

- Developed a fully responsive website delivering curated content for League of Legends players, featuring eSports news, meta builds, and player guides with an emphasis on UX and SEO best practices.
- Engineered client side functionality using vanilla JavaScript, implementing dynamic content filtering, event driven navigation, and asynchronous media embedding without backend dependencies.
- Integrated third party media streams and optimized content loading to enhance performance and engagement.

Rocket League Marketplace | *Python, Discord.py*

May 2018 – January 2021

- Built and maintained a Discord bot enabling 5,000+ users across 200+ servers to buy, sell, and trade Rocket League items using real time pricing data scraped from rlinsider.gg.
- Implemented Epic Games account syncing for secure user authentication and enhanced platform trust.
- Utilized Python and Discord.py to handle command routing, user interactions, and automated price updates.

TECHNICAL SKILLS

Languages: HTML, CSS, JavaScript, Python, PHP, C++, Bash, SQL, MATLAB

Frameworks / Libraries: Node.js, Express.js, Arduino, Discord.py, NumPy, Matplotlib

Databases: MySQL, MongoDB

Developer Tools: Git, GitHub, Postman, MongoDB Compass, Vercel, Visual Studio Code, Visual Studio, Eclipse, Linux, Pep9
